LEGACY BEACON

Website Redesign & Migration

Product Requirements Document

Scope: Public website redesign, Odoo migration, Pages CMS content management, FormSubmit enquiries, Google Calendar booking, SEO and Cloudflare deployment.

CLIENT	Legacy Beacon
PRIMARY CONTACT	Dr. Likita Aminu
PREPARED BY	Bold Ideas Innovations Ltd
VERSION	1.0
DATE	14 October 2026

Prepared for project delivery and client approval.

1. Executive Summary

Legacy Beacon will move its public website away from Odoo to a lightweight, fast and editable static website hosted on Cloudflare Pages. The site will be built with Astro and Tailwind CSS, while Pages CMS will provide the editing interface for authorised staff. Routine content changes and blog publishing will therefore not require code changes or direct GitHub use.

The website will use FormSubmit for contact enquiries, the company's existing Google Workspace email for receiving enquiries, and Google Calendar appointment scheduling for consultation bookings. No custom backend, database, VPS, CRM, Brevo integration or client portal is included in this project.

Primary outcome

A professional, fast and SEO-ready Legacy Beacon website that staff can edit through Pages CMS, with reliable enquiry delivery and consultation booking using existing Google Workspace tools.

2. Project Objectives

- Replace the current Odoo website with a custom public website hosted on Cloudflare Pages.
- Present Legacy Beacon as a credible, modern financial-services brand with clear service information and calls to action.
- Allow authorised staff to edit approved website content and publish blog articles through Pages CMS.
- Deliver contact-form enquiries directly to an official Legacy Beacon Google Workspace inbox using FormSubmit.
- Connect consultation booking to Google Calendar appointment scheduling.
- Improve site speed, mobile experience, technical SEO and search visibility.
- Migrate useful content from the existing Odoo site and preserve important URLs through redirects where required.
- Keep ongoing website infrastructure simple, secure and low-cost.

3. Agreed Scope of Work

Area	Included Scope
Website Design & Build	Complete redesign and rebuild of the public Legacy Beacon website in Astro with Tailwind CSS.
Content Management	Pages CMS configuration for page content, service content, FAQs, blog/resources and selected global settings.
Blog / Resources	Editable article publishing with draft/published status, categories, featured images and SEO fields.
Contact Enquiries	Custom website form connected to FormSubmit and delivered to an official Legacy Beacon Google Workspace inbox.

Appointment Booking	Google Calendar appointment schedule linked from website consultation calls to action.
SEO	Page metadata, sitemap, robots.txt, structured data, clean URLs, internal linking and migration redirects.
Migration	Review and migration of agreed useful content from the existing Odoo website.
Deployment	GitHub repository setup, Cloudflare Pages deployment, domain connection, SSL and production launch.
Quality Assurance	Responsive, browser, form, link, content and deployment testing before launch.

4. Technical Architecture

The website is intentionally serverless and database-free for this phase. Pages CMS edits content files in GitHub; Cloudflare Pages rebuilds and publishes the website automatically after approved content changes.

Layer	Technology	Role
Frontend	Astro	Static site framework and page generation.
Styling	Tailwind CSS	Responsive design system and reusable UI styling.
CMS	Pages CMS	Content editing and blog publishing interface.
Content	Markdown / MDX / structured data files	Stores editable page, service, FAQ and article content.
Repository	GitHub	Private source control and version history.
Hosting	Cloudflare Pages	Builds and serves the production website.
DNS / SSL / CDN	Cloudflare	Domain routing, HTTPS and content delivery.
Contact Forms	FormSubmit	Receives website submissions and forwards them to company email.
Business Email	Google Workspace	Receives contact enquiries and normal company email.
Appointments	Google Calendar	Publishes consultation availability and receives bookings.

Analytics	Google Analytics 4 / Cloudflare analytics	Traffic and engagement measurement, subject to available access.

Content publishing flow

Staff edits content in Pages CMS -> Pages CMS commits the change to GitHub -> Cloudflare Pages runs a new build -> the approved update is published to legacy-beacon.com.

5. Website Structure

The final navigation should remain simple and focused. Individual service pages will sit under the Services section, while educational content will sit under Resources.

Page / Section	Purpose	Key Content
Home	Explain the brand quickly and drive enquiries.	Hero, services overview, company introduction, trust content, resources, FAQ preview, consultation CTA.
About	Explain who Legacy Beacon is and why it exists.	Company story, mission, approach, founder profile, relevant credentials and CTA.
Services	Provide an overview of available services.	Service cards, short explanations and links to dedicated pages.
Service Pages	Educate visitors on each service.	What it is, common uses, who it may suit, considerations, FAQs and consultation CTA.
Resources	Central educational content hub.	Articles, and approved video/podcast links or embeds where supplied.
FAQ	Answer common visitor questions.	Editable questions and answers managed in Pages CMS.
Contact	Make it easy to reach Legacy Beacon.	Contact details, FormSubmit form, social links and booking CTA.
Book Consultation	Direct visitors to appointment scheduling.	Google Calendar appointment schedule link or embed where suitable.
Legal Pages	Publish required legal information.	Privacy Policy, Terms and approved disclosures/disclaimers.

6. Homepage Requirements

- Hero section with a clear statement of what Legacy Beacon does, supporting copy and a prominent Book a Consultation call to action.
- Brief company introduction that explains Legacy Beacon in plain language.
- Services overview with links to individual service pages.
- Simple explanation of how Legacy Beacon works with clients.
- Founder or company profile section using approved information supplied by Legacy Beacon.
- Trust content such as verified professional information, testimonials or affiliations where approved and legally appropriate.
- Recent resource/article section that updates automatically from published content.
- FAQ preview using selected CMS-managed questions.
- Final consultation/contact call to action before the footer.

7. Service Page Requirements

The project will create dedicated pages for the agreed core services. Initial service pages are expected to include Term Life Insurance, Whole Life Insurance, Indexed Universal Life, Mortgage Protection, Fixed Index Annuities and Final Expense, subject to final client confirmation.

- Clear introductory explanation.
- What the service or product is.
- Common planning needs it may address.
- Who may want to discuss the option with Legacy Beacon.
- Key considerations and appropriate qualifying language.
- Relevant FAQs.
- Consistent Book a Consultation call to action.
- Editable SEO title, meta description and social-sharing image.

All insurance and financial-product wording must be reviewed and approved by Legacy Beacon before publication. The website must avoid unsupported guarantees, return claims or tax statements.

8. Pages CMS Requirements

Pages CMS is the agreed content-management interface. It will expose only the fields Legacy Beacon needs to maintain content, while the visual layout and frontend components remain controlled by the website code.

Editable content

- Global company details: phone, email, address where used, social links and consultation link.
- Homepage: hero copy, selected images, section headings, introductory text and calls to action.
- About page content and founder/company information.
- Service page content, FAQs, calls to action and SEO fields.
- FAQ entries and ordering.
- Blog/resource articles, categories, featured images and publication status.
- Legal-page text where the client provides approved wording.

CMS guardrails

- Content editors will not receive unrestricted control of the page layout.
- Core navigation, responsive layout, components, styling and source code remain developer-controlled.
- Required structural sections should not be removable through normal CMS editing.
- Pages CMS should use clear field labels so normal content changes do not require Markdown or code knowledge.

9. Blog and Resources

The website will include an editable resources section built with Astro content collections. Pages CMS will be configured so staff can create, edit, save and publish articles without touching the repository directly.

Article Field	Requirement
Title	Required public article title.
Slug	Clean, unique URL path.
Author	Editable author name.
Publish Date	Used for article display and ordering.
Excerpt	Short summary for cards and search previews.
Featured Image	Primary article image.
Category	Editable content classification.
Body	Main article content.
SEO Title	Optional search title distinct from the visible title.
Meta Description	Search-engine summary.
Social Image	Optional Open Graph image.
Status	Draft or Published.

Publishing rule

Draft items must not appear publicly. Only content marked Published should be included in the live resources index and sitemap.

10. Contact Form and FormSubmit

The contact form will be visually integrated into the Legacy Beacon website but processed by FormSubmit. The website will not store enquiries in a custom database.

Recommended fields

- Full Name - required

- Email Address - required
- Phone Number - required or optional based on final client preference
- Service of Interest - selectable list
- Message - required
- Preferred Contact Method - optional
- Consent / privacy acknowledgement where required

Submission behaviour

1.
2.
3.
4.
5.

Form quality and protection

- Client-side validation for required fields and valid email formatting.
- FormSubmit anti-spam features configured where appropriate.
- The final integration should avoid unnecessarily exposing the destination email address in public markup when FormSubmit provides a tokenised option.
- No confidential or highly sensitive financial information should be requested through the general contact form.

11. Google Calendar Consultation Booking

Legacy Beacon already uses Google Workspace. Consultation booking will therefore use a Google Calendar appointment schedule rather than a custom scheduling backend.

- Book a Consultation buttons should be visible in key conversion areas.
- The booking action should open or embed the approved Google Calendar appointment schedule, depending on the best user experience.
- Google Calendar will control available dates, time slots, time-zone handling and booking confirmation.
- Legacy Beacon is responsible for maintaining staff availability and appointment rules inside Google Calendar.
- The website should not duplicate or store appointment records.

12. SEO Requirements

The redesign must include technical and on-page SEO foundations so the migration away from Odoo does not unnecessarily reduce search visibility.

Page-level SEO

- Unique HTML title and meta description for primary indexable pages.
- Clean, descriptive URLs.
- Canonical URLs.
- Open Graph title, description and image for social sharing.
- Correct heading hierarchy with one clear page-level H1.

- Meaningful image alt text.
- Internal links between relevant services, articles, FAQs and contact actions.

Technical SEO

- XML sitemap generated from public indexable content.
- Valid robots.txt.
- Schema.org structured data where accurate and appropriate, including Organization, WebSite, Article, BreadcrumbList and FAQPage where eligible.
- Responsive design and mobile-friendly navigation.
- Optimised images and minimal client-side JavaScript.
- 301 redirects for agreed Odoo URLs that are changing.
- Google Search Console setup or migration assistance where client access is provided.

13. Performance, Accessibility and Browser Requirements

- Static generation through Astro and delivery through Cloudflare CDN.
- Responsive layouts for mobile, tablet, laptop and desktop.
- Optimised image sizes and modern formats where suitable.
- Lazy loading for non-critical imagery and media.
- Semantic HTML and logical heading structure.
- Keyboard-accessible navigation and visible focus states.
- Sufficient text/background contrast.
- Proper labels for form controls.
- Support for current mainstream versions of Chrome, Edge, Safari and Firefox.

14. Odoo Content Migration

Useful content from the existing website will be reviewed and migrated into the new structure. Migration focuses on public website content, not Odoo CRM, contacts, internal records or other Odoo applications.

- Company and founder information.
- Service descriptions and FAQs.
- Approved images and media that remain suitable.
- Contact information.
- Existing public articles/resources where agreed.
- Legal pages and disclosures supplied or approved by Legacy Beacon.
- Relevant metadata and URL mapping needed for redirects.

Content may be reorganised or lightly rewritten for clarity, consistency and SEO instead of being copied verbatim where the existing structure is weak.

15. Deployment and Domain Cutover

11.
12.
13.
14.

16. Analytics and Measurement

- Configure Google Analytics 4 if Legacy Beacon provides or approves the required account/property access.
- Cloudflare analytics may also be enabled for lightweight traffic visibility.
- Track key actions where practical, including contact-form success and Book a Consultation clicks.
- Connect or verify Google Search Console where access is available.

17. Security and Access

- Website served over HTTPS.
- Private GitHub repository unless otherwise approved.
- No secrets or credentials committed to source control.
- Pages CMS access limited to authorised users.
- Two-factor authentication encouraged for GitHub, Google Workspace and other project accounts.
- FormSubmit used only for non-sensitive enquiry data.
- Git version history provides source and content change history.

18. Quality Assurance

- Check responsive layout on representative mobile, tablet and desktop viewport sizes.
- Verify navigation, buttons, service links, article links and legal links.
- Submit test contact enquiries and confirm delivery to the correct inbox.
- Verify thank-you page behaviour after successful form submission.
- Test consultation-booking links and Google Calendar availability flow.
- Validate that Pages CMS edits and blog publishing trigger successful Cloudflare deployments.
- Check metadata, sitemap, robots.txt and structured data.
- Review for obvious broken images, missing alt text and content overflow.
- Run final browser checks before DNS cutover.

19. Acceptance Criteria

Acceptance Item	Pass Condition
Production website	legacy-beacon.com serves the new Cloudflare-hosted website over HTTPS.
Core pages	All approved pages and service pages are present and functional.

Responsive design	The site is usable and visually consistent across mobile and desktop.
Pages CMS	Authorised staff can edit agreed content fields and publish an article successfully.
Blog	Draft content stays private and published content appears correctly.
Contact form	A real test submission reaches the designated Google Workspace inbox.
Thank-you flow	Successful contact submission redirects to the approved confirmation page.
Booking	Book a Consultation actions open the correct Google Calendar schedule.
SEO	Page metadata, sitemap, robots.txt and agreed structured data are present.
Migration	Agreed Odoo content is migrated and important changed URLs have redirects where required.
Analytics	Approved analytics/search tools are configured where account access is supplied.
Access	Legacy Beacon has access to the agreed Pages CMS and relevant project-owned accounts/repository as applicable.

20. Client Responsibilities

- Provide or approve the current logo, brand assets, contact details and social links.
- Provide or approve founder/company biography and service information.
- Approve all insurance, financial-product, legal and compliance wording before publication.
- Provide the official Google Workspace inbox for contact-form delivery.
- Create or provide access to the Google Calendar appointment schedule used for consultation booking.
- Provide domain/DNS access required for the Cloudflare cutover.
- Provide existing Odoo content or access needed to migrate agreed public website materials.
- Review and approve the website before final production launch.

21. Bold Ideas Innovations Ltd Responsibilities

- Website information architecture and responsive design implementation.
- Astro and Tailwind CSS development.
- Pages CMS configuration and editable content model.
- Blog/resources implementation.
- FormSubmit contact-form integration.
- Google Calendar booking integration on the website.

- Agreed Odoo public-content migration.
- Technical SEO implementation and redirect mapping.
- GitHub and Cloudflare Pages deployment configuration.
- Testing, production launch and basic Pages CMS orientation.

22. Out of Scope

The following are specifically outside this website project unless separately agreed in writing:

- Custom backend application, database or VPS.
- CRM or internal staff management tools.
- Client portal or authenticated customer accounts.
- Custom appointment-management system.
- Brevo, email marketing or marketing automation.
- Payment processing or e-commerce.
- Customer document storage or secure file portal.
- Odoo CRM/contact/internal-data migration.
- Social media management, social content creation or paid advertising.
- Custom mobile application.
- Legal, tax, insurance or compliance advice; Legacy Beacon remains responsible for approving such content.
- Third-party paid subscriptions, advertising spend or premium services not specifically included in the agreed website scope.

23. Final Scope Summary

This project delivers a redesigned Legacy Beacon public website hosted on Cloudflare Pages, built with Astro and Tailwind CSS, edited through Pages CMS, connected to FormSubmit for enquiries and Google Calendar for consultation booking. It includes the agreed public-content migration from Odoo, technical SEO, deployment and launch testing. The project does not include a custom backend, CRM or other internal business platform.

Agreed core stack

Astro + Tailwind CSS + Pages CMS + GitHub + Cloudflare Pages + FormSubmit + Google Workspace + Google Calendar.

Document Status: Project PRD - Website Scope

This document defines the functional and technical scope for the Legacy Beacon website redesign and migration project. Commercial terms are governed by the separate invoice/proposal issued for the project.
